

Reduce the Risk of Hospital Acquired Infections

INCREASE

- Compliance
- Accountability
- Patient and Staff Safety
- Traceability of Actions
- Culture of Hand Hygiene
- Real-Time Notification
- Actionable Reports

DECREASE

- Preventable HAI
- Cost Associated to HAI
- Breaching of Guidelines
- Staff Exposed to Infection
- Death Associated to Infection

NESA's Hand Hygiene solution, a component of our INSIGHT location Intelligence suite, is an effective way of reducing the risk of patients contracting an infectious disease as well as the healthcare costs associated with treating Hospital Acquired Infections (HAI). Our solution unifies proprietary real-time tracking, business, workflow and reporting engines to comply with the World Health Organization (WHO) Guidelines for The Five Moments for Hand Hygiene, significantly reducing the spread of HAI.

5 MOMENTS FOR HAND HYGIENE

Monitor, measure and improve hand hygiene compliance with NESAs Location Intelligence Solution

Problem

Poor hand hygiene is directly linked to increased risk of HAI and death of patients. HAI accounts for 700,000+ unnecessary infections annually, of whom 75,000 die during their hospital stay. On a daily basis, approximately 1 out of every 25 patients in a healthcare facility has an HAI.

The CDC estimates direct healthcare costs associated with HAI at approximately \$35 billion per year. Exacerbating this staggering cost, CMS is no longer reimbursing costs associated with treating HAI.

Solution

Having an effective, non-invasive, real-time hand hygiene notification, compliance and traceability system can save lives.

Imagine being able to custom build your own rules for when your employees must wash their hands. Imagine being able to implement those rules, organization-wide, instantly. Imagine being able to deliver real-time notifications to your employees when they're required to wash their hands. Imagine being able to receive real-time reporting as to your employees' compliance. And if an issue ever does arise within your organization, imagine being able to trace it back to its source, identify it, and identify who else within your organization that source came into contact.

Full accountability. Full traceability. That's the power of NESAs revolutionary Hand Hygiene solution.
